

## Geospatial Tools for Green Finance: Supporting Sustainable Project Selection and Impact Measurements

Franciamore, Federico; Toonen, Liv; Del Val, Victor; -, Ramadhan

### THE BOTTLENECK

Green capital is ready to move, but impact validation is slowing it down.

Proving real-world Nature & Climate impact means ingesting, verifying, and reconciling massive datasets. The result? **Data gaps**, manual bottlenecks, **rising costs**, and highly paid analysts stuck doing weeks of screening instead of closing deals.

### OUR SOLUTION

A secure, **cloud-based geospatial platform** designed to support screening, monitoring, and reporting of sustainability KPIs in green finance.

The tool integrates **Earth Observation** and open-source geospatial datasets to track deforestation, biodiversity, TNFD metrics, net carbon flux, and other environmental impact indicators, with the flexibility to extend to climate risk assessment or other reporting needs.

### HOW DOES IT WORK?

- Access: According to persona's profile
- Input: Upload project coordinates and info
- Process: Automated geospatial analysis
- Output: Fast, credible Nature & Climate insights for screening, monitoring, and reporting

### UNIQUE POTENTIAL

Building on automated KPI workflows, it streamlines decision-making and reporting for sustainable investments.

**90%** of time saved on screening, monitoring and reporting.

We are currently exploring its reusability and market potential, demonstrating how geospatial data can drive measurable, nature-positive financial outcomes and support compliance frameworks.

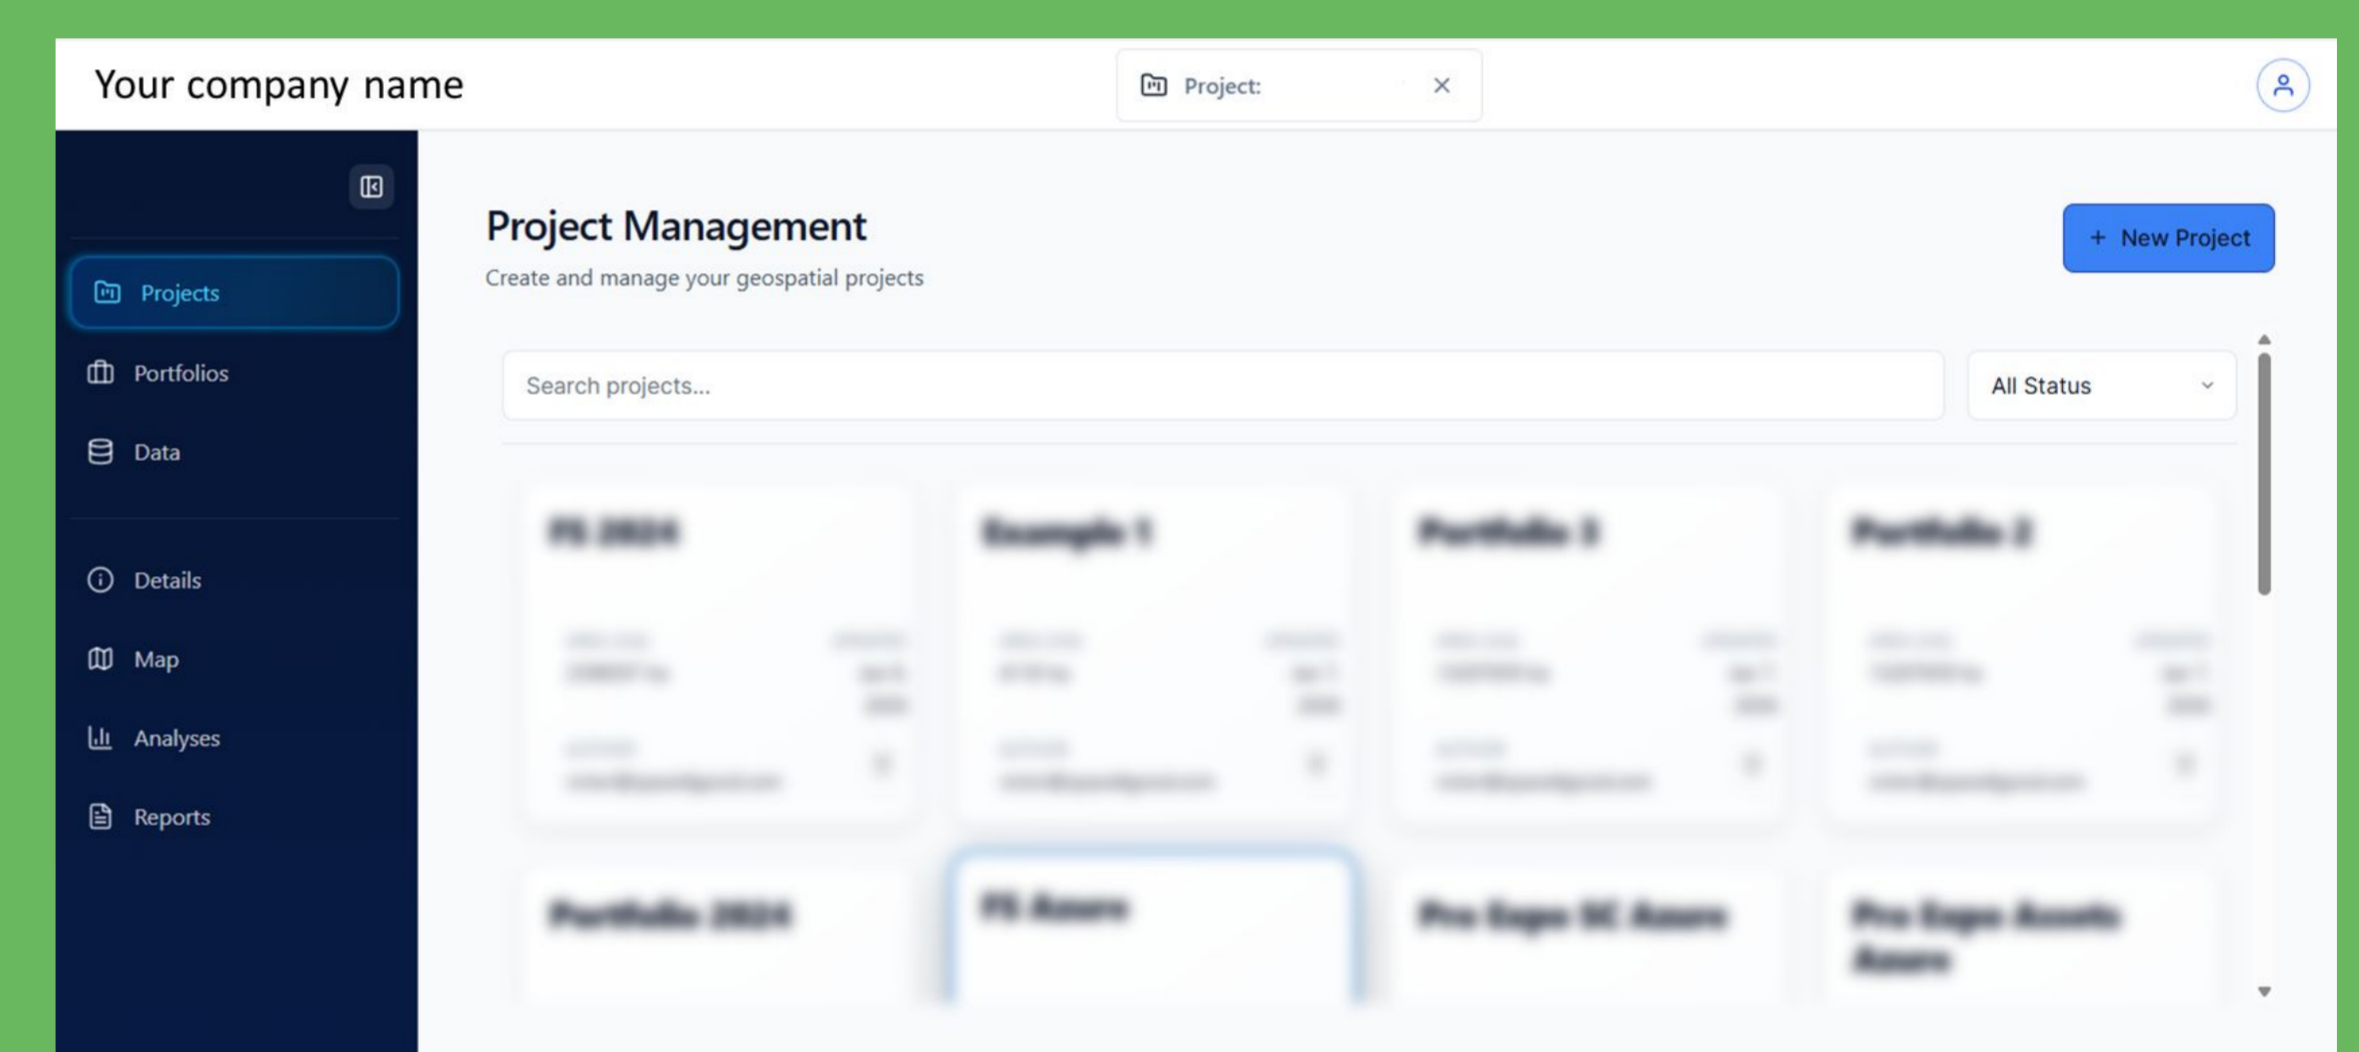

*Your end-to-end platform for Nature-Based Solution investments*

SPACE4GOOD

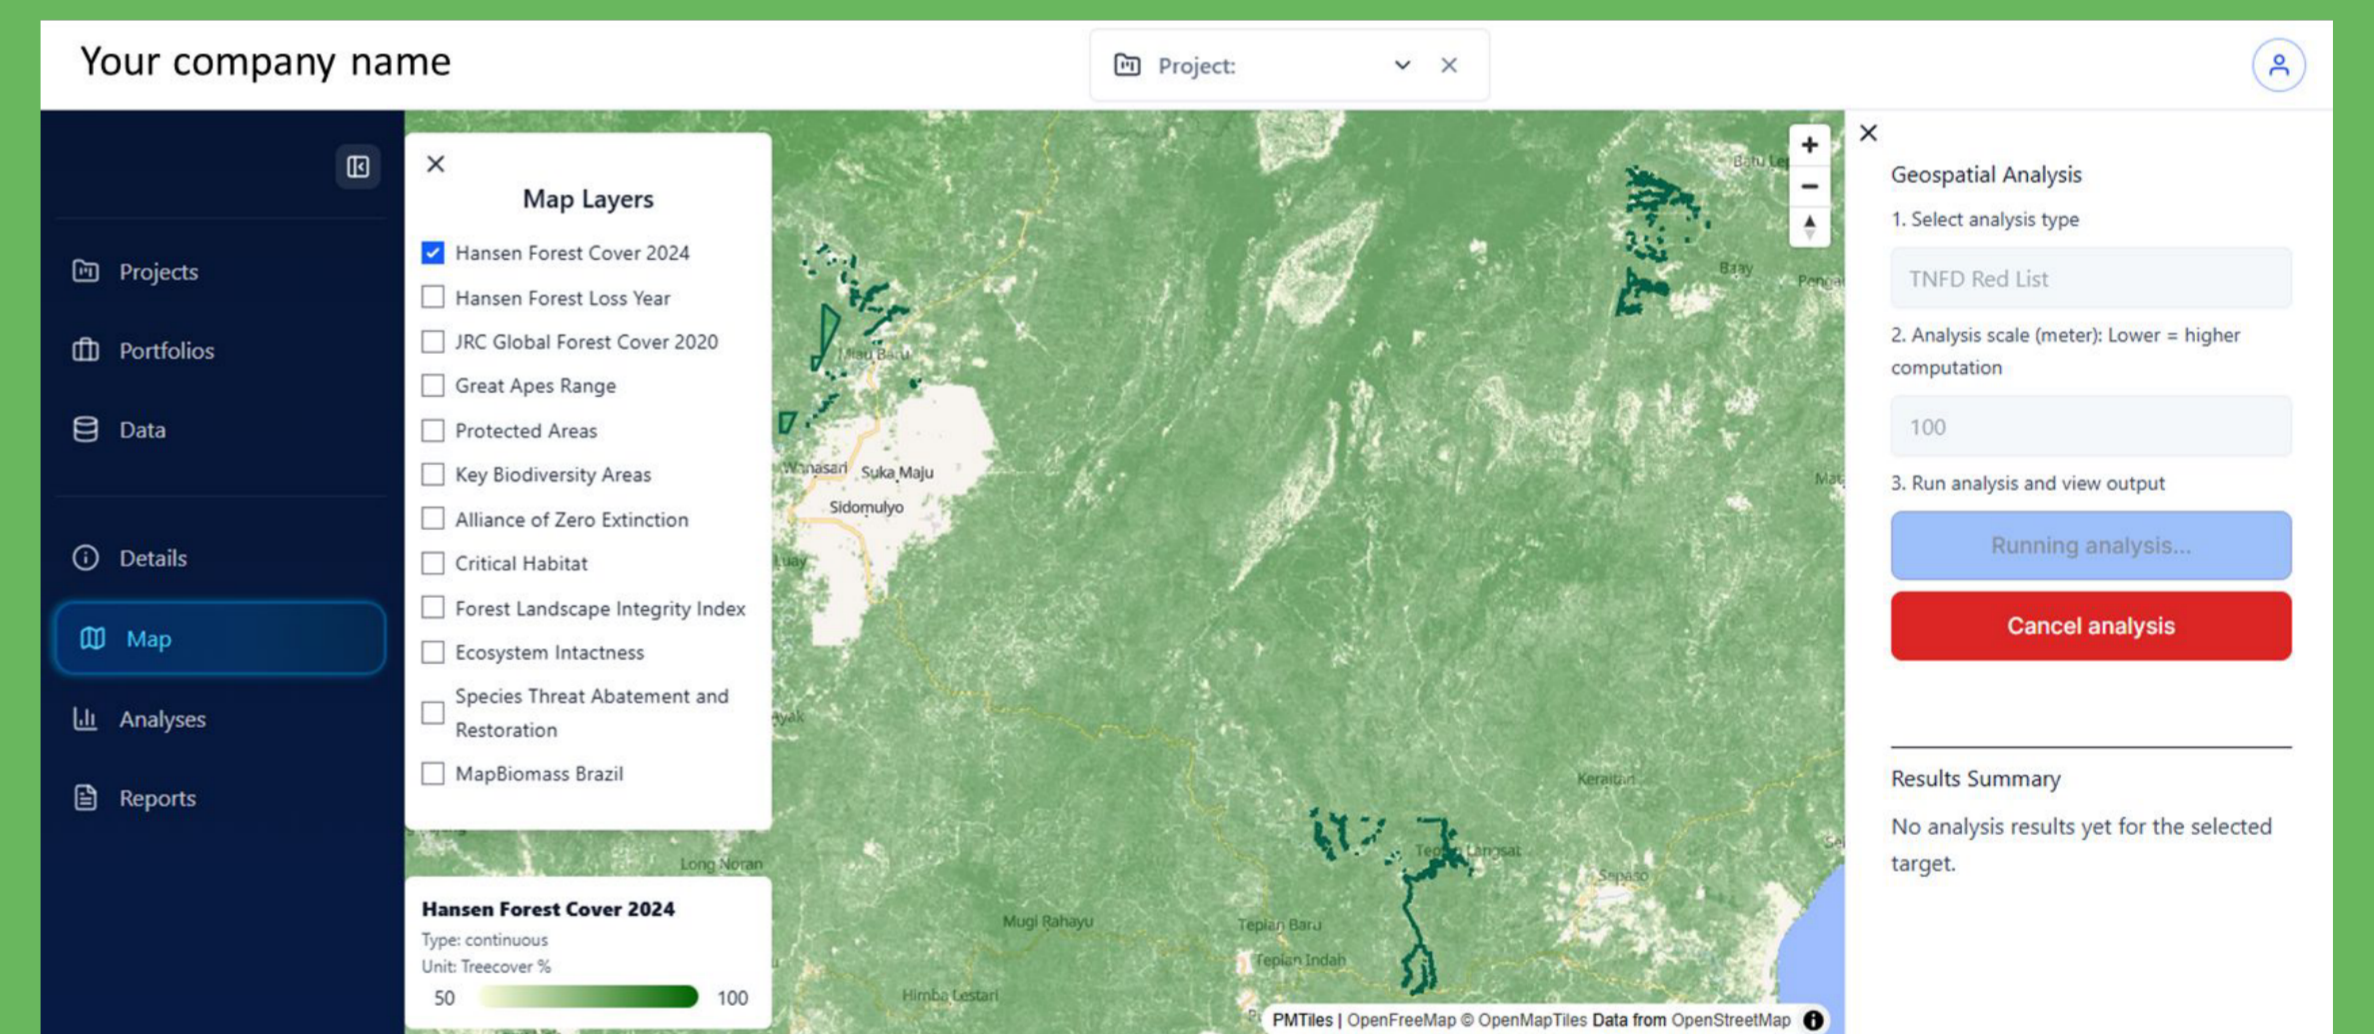

*From project boundaries to investment-grade intelligence*

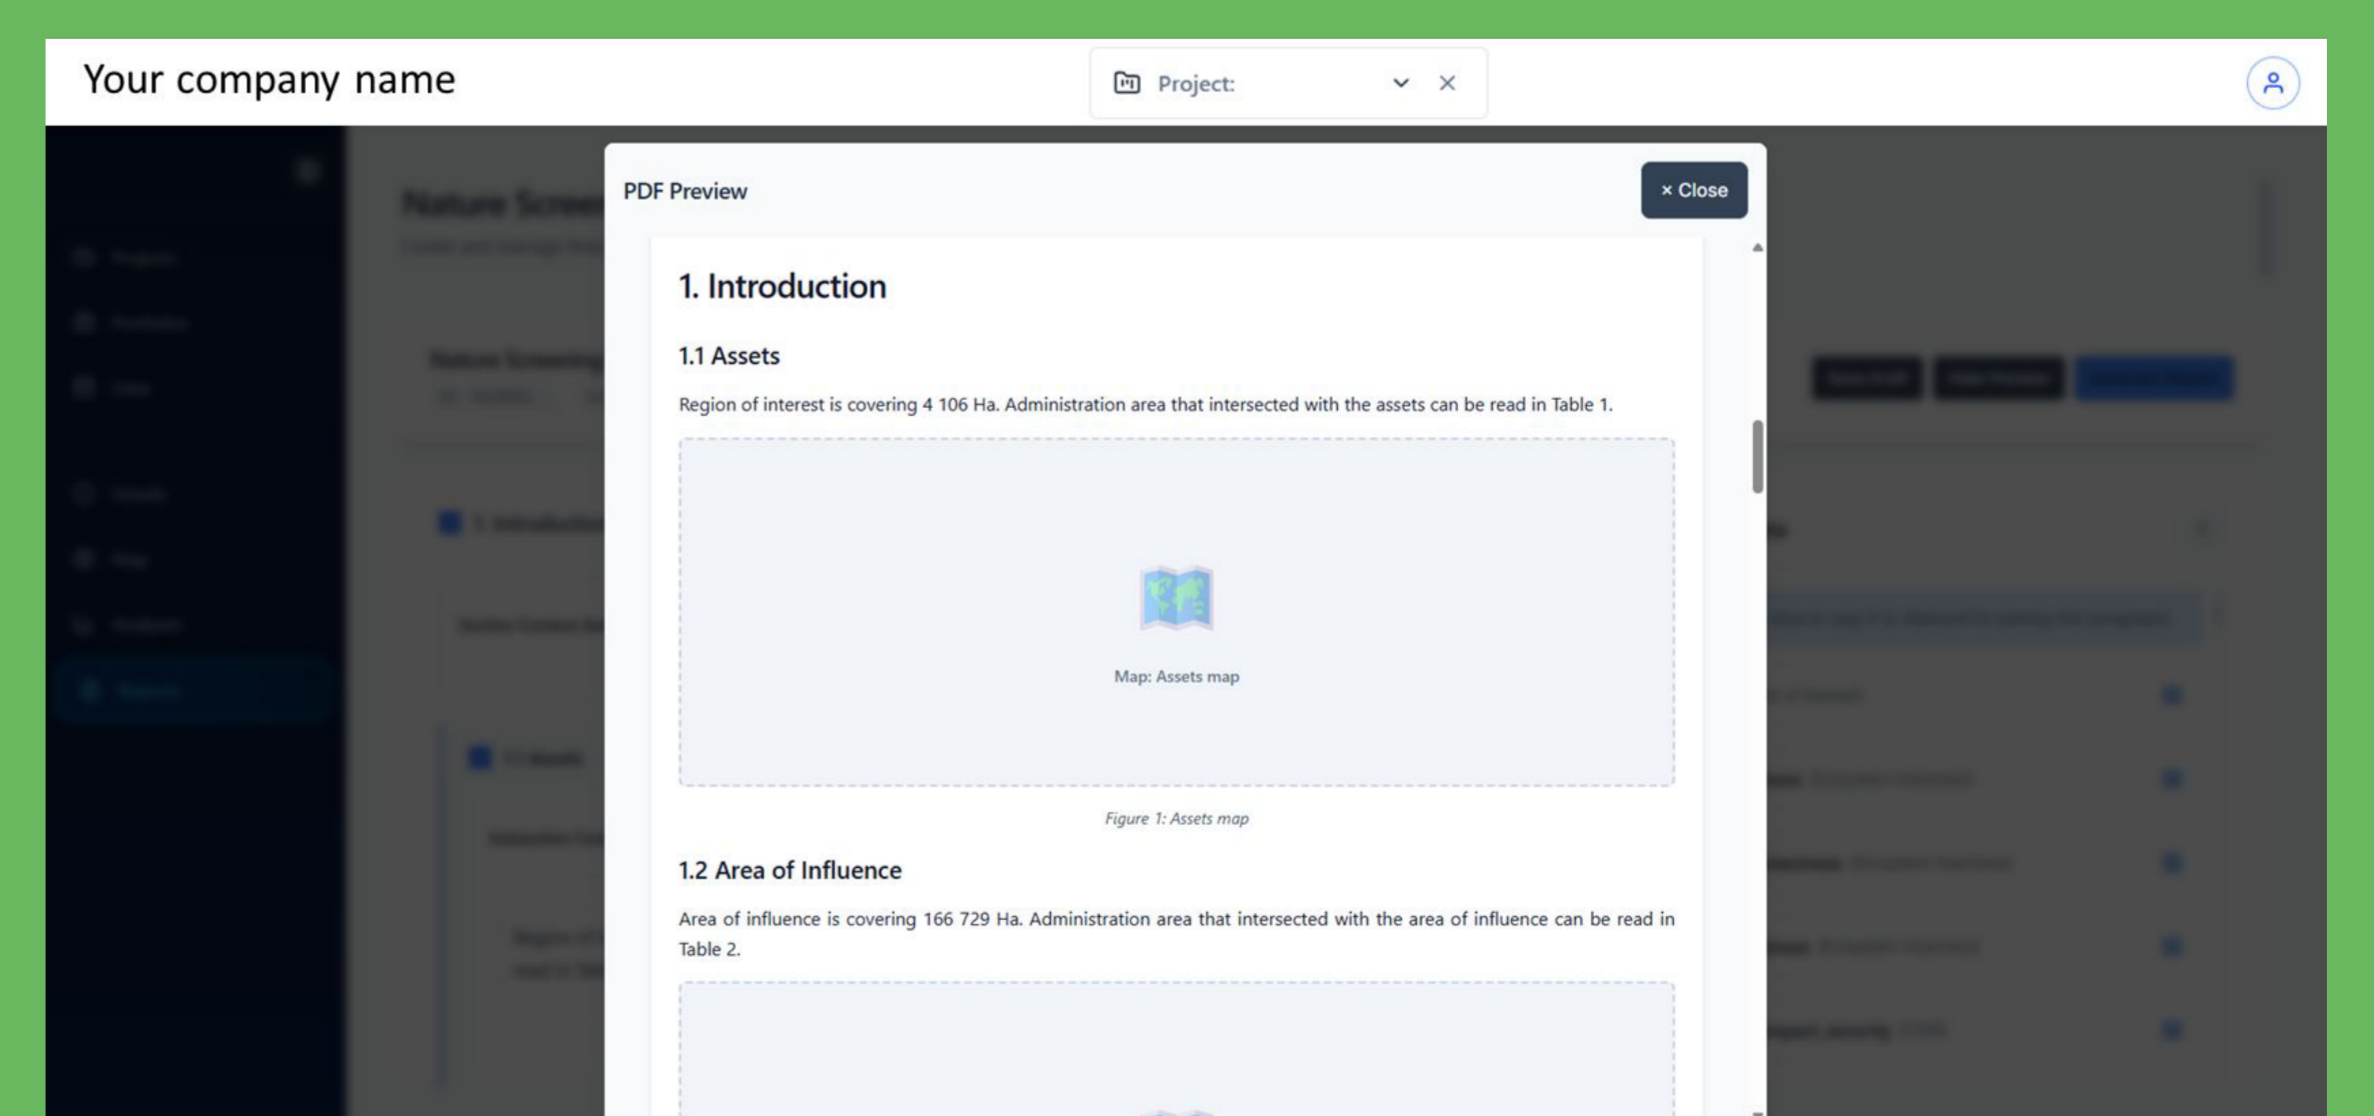

Manage & visualise your (potential) projects & portfolio

Visualise maps of impact KPIs and run analysis to screen, monitor, or assess project sites

Create automated impact reports within your template, ready share with stakeholders and investors
